property compliance manager

Reduce compliance risk, cost, optimise delivery,
and improve management processes.

Property Compliance Manager

Property Compliance Manager (PCM) is an industry leading web based inventory which allows dissemination of property compliance information across the estate and supplier base.

PCM provides a central repository of information including supplier assets, certificates, reports, and compliance recommendations. Data storage includes, but not limited to, CAD drawings, photographs, spreadsheets, PDFs, and electronic images.

On upload of new data all historic information is automatically archived presenting users with the ability to review changes in documentation and access to historic information for up to 40 years.

In the unfortunate circumstance that a customer should require access to information following an incident then PCM is the ideal platform for document retrieval and audit trail.

A large property estate generates a significant amount of compliance data, documentation, remedial actions, and re-inspection dates. PCM provides firstly a high level management dashboard detailing areas of risk and compliance in summary format and built in alerts for both primary and secondary suppliers for up coming events/renewals.

Property Compliance Manager is just one of the compliance services that we offer, if you would like to find out more about how we manage some of the UK's largest property estates for compliance, contact us now.

BES Consulting provides a broad portfolio of services and technology solutions to help its clients reduce costs and risk associated with management of statutory property compliance.

BES Consulting is in an excellent position to understand your business needs and to deliver significant benefits with consultancy, management, and technology. BES Consulting aim to become an integral part of customers business and to work with you and your suppliers to create a model for the management of data, risk, and cost-effective running of your compliance programs.
